Updated December 2010
Kentucky – Fueling the Automotive Industry

Auto manufacturers, along with their suppliers and dealers, provide a major driving force in the U.S. economy, and Kentucky is no exception. According to the U.S. Bureau of Economic Analysis, 1.6 percent of the state’s total employment in 2009 was in motor vehicles, bodies and trailers, and parts manufacturing. Moreover, in 2009, over 16.8 percent of the state’s workforce employed in manufacturing was employed in the motor vehicles, bodies and trailers, and parts manufacturing sector. Kentucky’s strength in the automotive industry can be attributed to many factors, including a productive workforce, central location, low cost of business, excellent workforce training programs and a pro-business government.

Quick facts on Kentucky’s auto industry:
- Kentucky ranked 3rd in light vehicle production in 2009.
- Kentucky is home to more than 400 automotive-related facilities, including four major auto assembly plants.
- In 2009, Kentucky had the nation’s 3rd highest level of auto industry-related employment as a percent of total state employment in the United States.
- In 2008, Kentucky’s automobile industry represented 3 percent of the state’s gross domestic product.
- Kentucky’s automotive industry gross domestic product for 2008 was over $4.6 billion.

Kentucky Auto Assembly Plants

Kentucky is the proud home of auto-manufacturing giants Ford, GM and Toyota. Following are brief histories of their manufacturing facilities in Kentucky:

Ford first came to Kentucky in 1912, when it opened a sales and service office on South Third Street in Louisville. By 1916, production had started in the four-story brick building making 7,000 Model A’s and other Ford trucks and cars per year. During World War II, the plant geared up to produce military equipment, but closed in 1925 - the same year Henry Ford created what was called "the first modern assembly plant" in Louisville. In 1955, Ford began operations at the Louisville Assembly Plant, and in 1969, began operations at the eastern Jefferson County Truck Plant. Today, the Ford story continues. In 2010, the company announced a $600 million investment at its Louisville Assembly Plant to transform it into Ford’s most-flexible, high-volume plant in the world. Once complete, the state-of-the-art facility will produce the next-generation Escape for the North America Market. The investment follows a previous $200 million investment made in 2008 at the Kentucky Truck Plant, the second-largest Ford assembly plant in North America, to accommodate Ford Expedition and Lincoln Navigator production. The plant also manufactures the Ford F-Series Super Duty. Total employment at both Kentucky plants is expected to reach 6,600 by the end of 2011.

On June 1, 1981, General Motors moved production of the Corvette from St. Louis to Bowling Green, which remains today as the exclusive home of the iconic Corvette. The plant’s 469 employees built over 7,300 Corvettes at the 1 million square-foot plant in 2009. The Cadillac XLR was also produced in Bowling Green, from June 2003 to April 2009. The Bowling Green plant celebrated the production of its 1.5 millionth Corvette on May 28, 2009. In addition to the manufacturing plant, The National Corvette Museum attracts enthusiasts from all over the world. The museum celebrates the Corvette, preserving its past, present and future, while also serving as an educational and research model. In 2010, legislation was passed making the Corvette Kentucky’s official state sports car.

Toyota Motor Corporation located its first North American manufacturing plant in Georgetown in 1988. Today, Toyota Motor Manufacturing Kentucky (TMMK) is Toyota's largest production plant in the world with two vehicle-production lines and a powertrain engine and axle facility. In 2009, 7,000 team members built about 500,000 vehicles and nearly 400,000 engines. The plant manufactures the Camry, Camry Hybrid, Avalon and Venza. Toyota was so pleased with its success in Georgetown, it also decided to locate its North American Headquarters in Erlanger and its North American Parts Logistics Division in Hebron, employing over 1,100 and 400 people respectively.
Kentucky Automobile Production Facts

- In 2009, 649,422 cars and light trucks were assembled in Kentucky.
- Kentucky ranked 3rd in light vehicle production in 2009.
- Kentucky ranks 3rd in car production, 5th in truck production.
- 11.6 percent of all cars and trucks produced in the U.S. were made in Kentucky in 2009.

Impact on Kentucky’s Economy

The motor vehicle industry continues to have a very strong presence in Kentucky. In 2009, a workforce of nearly 65,000 was employed in motor vehicle-related facilities in Kentucky. Employment in the motor vehicle industry decreased by 18 percent between 2008 and 2009, compared to a decrease of 3 percent for all industries and negative growth for manufacturing. Although Kentucky’s employment growth in the motor vehicle-manufacturing sector was negative between 2008 and 2009, it still ranks 3rd best among the top 10 motor vehicle-producing states.

The gross domestic product for the motor vehicle industry in 2008 was $4.6 billion, ranking Kentucky 4th among the top motor vehicle-producing states. Kentucky’s 2008 GDP per capita of $1,079 for the motor vehicle industry ranks the state 3rd in the nation. The Annual Survey of Manufacturers’ November 2008 issue lists the value of shipments for the motor vehicle industry at nearly $29 billion, which ranks Kentucky among the upper half of the top motor vehicle-producing states.

Source: Bureau of Economic Analysis, U.S. Department of Commerce, Regional Economic Accounts Data. Note: In this table, the Motor Vehicle Industry is defined by NAICS 3361, 3362 and 3363.

The motor vehicle industry continues to impact the economy and people of the Commonwealth in a very positive manner. The motor vehicle industry provides thousands of high-wage jobs to the people of Kentucky. In 2009, the average weekly wage for motor vehicle manufacturing was $1,393, compared to $923 for the manufacturing sector and $723 for all industries. Employees in the motor vehicle industry earned over $2.3 billion in wages in 2009, and wages earned totaled over $900 million in the motor vehicle manufacturing segment of the industry. The motor vehicle industry accounted for 2.94 percent of Kentucky’s total GDP in 2008. Of the top motor vehicle-producing states, only Michigan’s and Indiana’s motor vehicle industries comprise a larger share of their states’ overall economy.

1 This figure represents total employment for each motor vehicle-related facility. Actual employment related to production of motor vehicle components, parts, or services is lower since some employees are involved in production of products or services unrelated to motor vehicles.
**Motor Vehicle Industry Productivity**

Productivity is a measure of economic efficiency which shows how effectively economic inputs are converted into output. Among the top automobile-producing states, Kentucky ranks 5th in worker productivity as measured by industry GDP per dollar of wages paid.

**Key Partnerships Impacting Kentucky’s Auto Industry**

**Kentucky – Argonne National Battery Manufacturing and R&D Center**
Argonne National Laboratory has partnered with the Commonwealth of Kentucky, the University of Kentucky and the University of Louisville to establish a national battery manufacturing R&D center in Lexington. The facility will help develop and deploy a domestic supply of advanced battery technologies for vehicle applications that will aid in securing U.S. energy independence, reduce greenhouse gas emissions and help in strengthening the economy.

The center’s major goals are to support the development of a viable U.S. battery manufacturing industry; make it easier for federal labs, universities, manufacturers, suppliers and end-users to collaborate; develop advanced-manufacturing technology to reduce advanced battery production costs; and accelerate the commercialization of technologies developed at national laboratories and universities.

The center will initially focus on lithium-ion battery manufacturing R&D. In the long-term, the center will help in the development of technologies that would enable a significant increase in energy densities, including lithium-air and zinc-air systems for vehicle applications and advanced batteries for cost efficient and long-life grid power storage applications.

**University of Kentucky Center for Manufacturing**
The University of Kentucky (UK) Center for Manufacturing is a world renowned center for its research, education and technical assistance in manufacturing. The Center for Manufacturing provides engineering assistance to approximately 15,000 people in North America and Europe with its staff of professional engineers with extensive industrial experience. The center conducts research on manufacturing systems and provides a wide range of educational opportunities for students and industrial professionals. The Center for Manufacturing has earned praise from organizations such as the Society of Manufacturing Engineers in recent years, for its strong emphasis on manufacturing research and education.

Because of the center’s capabilities, Toyota Motor Manufacturing Kentucky selected it to develop a working model of the Toyota production system. The center’s efforts with Toyota resulted in the Lean Manufacturing Program, an integrated research, education, and technology transfer effort. The Lean Manufacturing Program has trained and taught thousands of people from hundreds of companies throughout the world on the concepts of lean manufacturing. The program includes courses for operating managers and first-line supervisors, customized in-plant training, the International Lean Manufacturing Conference, Lean Manufacturing Network (users group for practicing lean manufacturing principles) and a simulation that demonstrates the affect of lean manufacturing implementation.

As a result of a strategic effort by UK to move to the forefront of new technologies and workforce development for the future of manufacturing, the Center for Manufacturing will be integrated into a new proposed entity – the Institute for Sustainable Manufacturing (ISM). The ISM will serve as a leading international organization committed to the development and deployment of sustainable manufacturing technologies for products, processes and systems for significantly enhancing the manufacturing productivity, efficiency and quality through its highly effective research, educational and outreach programs aimed at new technology and workforce development for next-generation manufacturing.
Kentucky’s Central Location within Auto Alley

Transportation

A freight distribution network that is efficient, safe, and technologically competitive makes Kentucky an ideal location for businesses needing just-in-time delivery and reliable access to markets and suppliers. Geographically located within a day’s highway travel of two-third’s of the nation’s buying power, Kentucky maintains a continuing six-year highway construction and improvement plan that ensures necessary structured growth and regular maintenance.

The backbone of the Commonwealth’s 79,000 miles of federal, state and local roads is five major Interstate highways (I-75, I-71, I-65, I-64 and I-24), providing direct routes to the Great Lakes and Canada, the Gulf States and Florida, the Atlantic Seaboard, and St. Louis and points west. Within the state, nine major parkways/highways provide access to the Interstate system, while state maintenance covers nearly 40 percent of the entire highway network. Nationwide surveys show that both the Louisville and the Cincinnati, Ohio-Kentucky-Indiana areas are logistically ranked in the top 20 for cities with access to Interstate highways.

Many of Kentucky’s communities have been recognized nationally for their logistics advantages. In its seventh annual Logistics Quotient, Expansion Management magazine designated the Louisville and Northern KY/Cincinnati areas as 5-Star metros, indicating they scored in the top 20 percent of the nation’s 362 metropolitan areas. Chicago Consulting, a leading supply chain consultant, has named the Henderson area the nation’s best location for warehouse networks. The Louisville metro area ranked 10th in the nation for “Best Air Cargo Capacity” according to the U.S. Department of Commerce.

Kentucky’s railroads – CSX, Norfolk Southern, and Canadian National Railroads - ensure direct service from Kentucky to the major rail centers of the Great Lakes, Gulf of Mexico and Atlantic Seaboard.

Accessibility to modern major airport services and safe, efficient air travel for business purposes are well addressed by Kentucky’s statewide system of commercial and general aviation airports. The Lexington Blue Grass Airport (LEX) provides non-stop service to several large hub airports. Non-stop international flights depart from the Cincinnati/Northern Kentucky International Airport (CVG) and from the Louisville International Airport (SDF) in Louisville/Jefferson County.

Since 1994, travelers have consistently named CVG one of the best airports in the world in surveys by IATA, AC Nielsen, OAG Worldwide and SkyTrax magazine. The J.D. Power & Associates Survey of Frequent Flyers in 2008, ranks CVG as one of 10 Best Hubs in North America. In 2006, the editors of CityBloc.com, a web site that compiles data, statistics, facts and figures about the United States, ranked CVG as one of the top 10 airports in North America. For the year 2005, SkyTrax Research, a London-based reporting company, ranked CVG the 2nd best airport in the United States.

CVG served over 10.6 million passengers in 2009. It is one of the top airports in the U.S. for on-time arrivals. Seven passenger airlines offer 220 daily departures and fly to 70 cities worldwide. CVG offers daily non-stop international fights to Paris, Toronto, Montreal and Cancun.

SDF is home to the international air-sorting hub of United Parcel Service (UPS). UPS Worldport, the world’s most sophisticated shipping facility, has helped make SDF the 3rd largest cargo airport in the nation and the 7th largest cargo airport in the world according to AirCargo World.

The airport now has 110 daily departures with non-stop service to 20 destinations and offers convenient connections to hundreds of cities worldwide. SDF accommodated more than 3.6 million passengers in 2008.

LEX, in Lexington/Fayette County, is serviced by six major brands operating 12 airlines with 43 daily departures and 43 daily arrivals. In 2008, the airport served over 1 million passengers. Non-stop commercial service is provided to 14 cities and is available to destinations worldwide. LEX also provides services for general aviation and private/corporate aviation clients from around the world. It was the first airport in the nation to implement 100 percent cargo screening by using an inline baggage screening system. The airport has an on-site U.S. Customs office and provides aircraft maintenance and repair services. Air cargo and charter services are also readily available. LEX, located four miles west of Lexington, is easily accessed from I-64, I-75, US 60, and the Blue Grass Parkway.
Business Cost Comparison

Kentucky is one of the nation’s best states for business. In the Cost of Doing Business category, Kentucky has one of the lowest overall costs of doing business in the eastern United States according to Economy.com. The June 2010 edition of the North American Business Cost Review, measures the cost of doing business within a state for unit labor cost, tax burden, and energy cost.

Kentucky tied as the 9th lowest in overall cost of doing business in the nation. When compared to all states east of the Mississippi River and to states generally considered Kentucky’s economic competitors, the state ranks 3rd and 4th, respectively. The index utilized to measure the overall cost of doing business within a state determined Kentucky to have an index of 90. The national average index is 100.

Labor Cost Comparison

The labor costs for Kentucky employers compare very favorably to those in the other top auto-production states, especially considering the high productivity of the Kentucky workforce. The average weekly wages are below the U.S. average for all of private industry, manufacturing and motor vehicle manufacturing. With respect to manufacturing, among the top 10 auto-producing states, only Alabama has lower, average weekly wages than Kentucky. For all private industry, the average weekly wages in Kentucky are the lowest among these states. The Cost of Doing Business Table (6) shows that Kentucky’s overall business cost ranking is tied for lowest among top motor vehicle-producing states. Kentucky also ranks 4th lowest among the top auto-producing states with respect to unit labor cost. A recent study on the cost of workers compensation finds that the cost of providing workers compensation insurance is lower than the national average. (Note: Ohio data is not available for workers compensation cost index because it is one of five states that provided workers compensation insurance exclusively through a state fund.)

As shown in the Labor Cost Table (7), Kentucky ranks 5th lowest among the top auto-producing states with respect to the average weekly wages for the motor vehicle manufacturing industry. Moreover, as shown by Table (5), the motor vehicle manufacturing workforce in Kentucky is among the most productive of the top motor vehicle-producing states. Kentucky’s productivity rankings among these states:
- 4th in motor vehicle GDP per capita
- 3rd in motor vehicle GDP per $ Motor Vehicle Wage

Tax Costs

Kentucky continues to have one of the lowest overall business costs among the top automotive producing states according to Economy.com. The June 2009 edition of the North American Business Cost Review, measures the cost of doing business within a state for unit labor cost, tax burden, and energy cost.

Among the nation’s top 10 states in light vehicle production, Kentucky’s tax cost of business is among the lowest. The index utilized to measure overall cost of doing business within a state ranks Kentucky as the 12th lowest nationally with a state index of 90.0 (see Table 6). Nationally, Kentucky ranks 5th lowest in per capita state and local government property tax burden, and 13th lowest in per capita state and local government tax burden.

Note: A ranking of 1 represents the best condition = lowest business tax burden

Tax Modernization

In March 2005, House Bill 272 legislation was signed into law to reform Kentucky’s outdated tax system. The legislation began the first comprehensive overhaul in more than half a century to a revenue system largely based on a 19th century economy. The reform sought to accomplish several objectives including improving the tax climate for economic development, eliminating the corporate license and intangible property taxes cost.

Kentucky Business Incentives and Financial Programs

Kentucky’s pro-business climate provides a number of progressive incentives for businesses. The Kentucky Economic Development Finance Authority (KEDFA), established within the Cabinet for Economic Development to encourage economic development, business expansion, and job creation, provides financial support through an array of financial assistance and tax credit programs. Helping businesses in this way furthers the Commonwealth’s goals of achieving long-term economic growth and employment opportunities for its citizens.

Kentucky’s economic development incentive toolbox was further enhanced when Governor Steve Beshear signed into law legislation, known as Incentives for the New Kentucky (INK), in June 2009, streamlining and modernizing Kentucky’s business incentive programs. The landmark legislation revamps key existing programs, while also creating several new programs to further encourage new investment and job creation in the Commonwealth.
Utility Costs

A globally competitive business environment compels companies to examine the long-term costs of production and distribution, and to focus on regional differences in the net costs of doing business. Among the most significant factors having a direct influence on bottom-line costs is the annual capital that must be committed to utility consumption. Kentucky occupies a premier position in the provision of low-cost electric power among the top vehicle-producing states, enjoying significant cost savings over nearly every competitor.

In 2009, Kentucky provided the 2nd lowest electric power cost east of the Mississippi River – and 2nd least expensive among the top vehicle-producing states. Moreover, in 2009, data from the U.S. Department of Energy, Energy Information Administration, show that Kentucky lays claim to the position of 6th lowest among all 50 states for the provision of industrial electric power.

Table 9

INDUSTRIAL SECTOR COSTS
Average Revenue Per Kilowatthour

Kentucky’s industrial sector electric power costs rank 6th lowest in the nation.

Approximately 91 percent of Kentucky’s electric power is produced by coal-fired power plants, with the balance generated by hydroelectric dams, fuel oil and natural gas. Kentucky’s large coal reserves ensure abundant supplies of electric power for the foreseeable future. In turn, a large number of utility providers, and oversight by the Kentucky Public Service Commission (PSC), continue to ensure competitive rates for industrial users. These power distributors are allowed to negotiate lower economic incentive rate contracts with large industrial and commercial customers, subject to approval by the Kentucky PSC. Significant discount rates can be granted for up to five years for both new and expanding operations.
